PQI Customers “Make It Right the First Time”

Splitting hairs is an everyday occurrence for Productivity Quality. Their customers often ask them for measurement solutions that determine sizes as small as one hair divided into one thousand parts. That’s a lot of zeros: .000003”, but numbers are everything to Productivity Quality and that’s what led them to Sage MAS 200 ERP and JobOps.

PQI represents some of the leading names in the quality assurance (QA) business, offering measurement and machine productivity equipment, parts, related service, and training. Devices include capitalized equipment for tool and die companies, plus various types of probes, precision scales and encoders, micrometers, calipers, and digital gauges. PQI is known throughout a five-state area for customized assemblies that enhance QA on specific machines, as well as providing premium customer service.

Old System Doesn’t Measure Up

Although PQI was spun off from Productivity Inc. in 1991, they continued piggy-backing on the parent’s business software for years. The problem was that PQI had its own

software needs that weren’t being met. The system couldn’t track the service portion of the business, for one thing—a big issue since service brings in 25 percent of annual revenue. Neither did it provide sufficient flexibility for internal modification.

So PQI went shopping. At the top of their wish list, besides advanced accounting features, was the ability to monitor service operations on a project-by-project basis.

Sage MAS 200 with JobOps was the first package they looked at. As it turned out, no other system could touch it for features and value.

CHALLENGE

Secure and advanced accounting system equipped with the tools to manage service operations.

SOLUTION

Sage MAS 200 and JobOps.

VERTICAL MARKETING PARTNER

Synergistic Software Solutions, LLC
Minneapolis, MN

RESULTS

Streamlined integration and seamless data flow; faster posting and month end; advanced analysis and reporting; quick, single-screen drill down; strategic service, inventory and expense management.

Your business in mind.

"The interface between JobOps and Sage MAS 200 is so smooth that it all feels like a single package. Together, they give us a very robust system that does everything we need—a perfect match for our size of firm."

—JoAnn Linnell
Accounting Manager
PQI

ABOUT SAGE SOFTWARE

Sage Software has been responding to the needs, challenges, and dreams of small and mid-sized businesses for over 25 years. With a complete range of business management solutions and services, Sage Software helps companies improve customer relationships, reduce costs, and automate and integrate a variety of operational activities. Its solutions support the specialty needs of a broad scope of industry segments, including manufacturing, distribution, construction, real estate, nonprofit, and professional services.

The Right Specs for Success

Sage MAS 200 now performs a complete range of business functions for PQI. General ledger postings, month-end processing, and reporting are much faster than ever before. JoAnn Linnell, PQI's accounting manager, appreciates being able to drill down quickly with the intuitive menu system of Sage MAS 200, following the trail of various transactions without opening up dozens of screens.

Linnell also makes frequent use of Business Insights, a reporting tool included in Sage MAS 200. Customizable reports provide critical business information in a high-level graphical format for instant access and speedy decision-making.

"I use Business Insights to get sales numbers and financial ratio information quickly," Linnell says. "Business Insights links all our data and gives us a snapshot of how we're doing—with analyses like sales breakdowns, costs, best sales for the period, and year-to-date figures too. It's a very helpful feature."

Central to the new Sage Software system has been JobOps, a graphically based job operations and production system from Synergistic Software Solutions. JobOps combines the features of job costing, bill of materials, and manufacturing systems into one cohesive module to manage resources and monitor expenses. PQI uses it to manage all sales orders, stocking, direct shipping, inside assemblies, and service activities.

"JobOps is the most important module on this system for us because it links purchase orders to sales orders," explains Linnell. "It allows us to create work tickets for different types of jobs, so we can break out tasks like calibration, repair, and assembly. Work-in-progress reports make it simple for us to keep an eye on open orders and know when they're ready to be shipped. Our service department manager uses JobOps to track when parts come in so as to better monitor inventory. Perhaps the best part is that we can calculate profits and know which orders contribute most to our bottom line."

The new system has eliminated confusion and improved organization at PQI. "The interface between JobOps and Sage MAS 200 is so smooth that it all feels like a single package," explains Linnell. "Together, they give us a very robust system that does everything we need—a perfect match for our size of firm."
